# MPA
Mobile Public Address

This revolutionary app secures crowd control in operations, disasters and events.

Deploy content of public address, anywhere at anytime.

desktop administration → mobile phone distribution ✳ public address anywhere + anytime

Administration with CMS at desktop:

MPA software has been developed to provide quickly warnings and information via loud-speakers. The CMS (Content Management System) of MPA **at the desktop** enables the control centre to create and manage topic-specific audio libraries even in „times of peace". Announcements can be created mono- and multilingual.

Share files and content, like announcements and sounds, with other organisations.

MPA-CMS is a web application for the desktop. It can be accessed via internet browser, without installation and from any location. Use MPA-CMS at PC, notebook, tablet and mobile phone.

- manage announcements
- create new announcements:
- upload sounds hard disk
- record voice messages
- with „text-to-speech"-tool
- mono- or also multilingual
- MPA-CMS synchronisizes itself with MPA-App at the mobile phones of the app-users

## Distribution with app at mobile phone:

In the event the MPA-App **at the mobile phone**, takes over. The content, in synch with the CMS of MPA, is now broadcast by Bluetooth to siren-speakers of emergency vehicles*), or also to portable or stationary speakers.

With an active internet connection the content is live-updated all the time. Even if the hole mobile phone network fails, the existing audio library is available, still to broadcast content to the speakers. The system is „blackout-safe".

For needs on spontaneaus speech content the MPA-App turns the **mobile phone into a wireless microphone**. The functions live-speech, record and play help to assert oneself acoustically also in rapidly changing operational situations.

*) via EUROSIGNAL-Bluetooth®-receiver or indirect via Bluetooth®-connection of your vehicle. For elder vehicle models, cable plug connections may also be an alternative.

- CMS-content in synch at mobile phone: all announcements and sounds, also available if internet connection fails
- configure content before streaming: - for playback once or in a loop - announcements mono- or multilingual
- create shortcuts: quick access to individual content
- broadcast via Bluetooth®: broadcast of all content to speakers
- turns phone into a microphone and recorder: via Bluetooth®, with the functions live-speech, record and play
- Bluetooth® is Blackout-safe: also works 100% offline, without internet connection and mobile phone network

Quickstart MPA-CMS:

Try for free

www.eutooth.com

1 Register at www.eutooth.com and become master-administrator

2 Add more admins and authorized MPA-App users.

3 Create announcements in currently 20 languages and with 60 natural voices! (More being added)

4
- Browse sample folders by name, some filled with templates
- Create and populate your own directories with...

5 ...
- subdirectories
- announcements
- sounds

+ Add
- Directory
- Announcement
- Noise

6 Announcements can be created by
- upload
- record
- „text-to-speech"

Create content
Upload file | Record | Text to speech
Drag file here or Browse...
Overwrite filename
Create content

7 Create your announcements multilingual

Audio files › [6] Feuerwehr › EN › Blackout › Blackout-Announcement
